

CORONAVIRUS

COVID-19 SURFACE TESTING

DID YOU KNOW?

According to the WHO, coronaviruses may persist on surfaces for a few hours or up to several days.

Coronavirus testing of surfaces can be used as a tool in conjunction with your COVID Safe Plan to review and monitor cleaning and hygiene protocols, to provide peace of mind to your workers and customers and to assist in managing the risk of further disruption posed by this pandemic.

SARS-CoV-2 testing by Environmental & Laboratory Solutions will enable organisations across a range of industries to help test, evaluate, monitor and strengthen the effectiveness of sanitation measures put in place.

Offices
Shopping Centres
Public Transport
Industrial and construction sites
Schools & Childcare Facilities
Restaurants
Cinemas

Testing can be performed as a once-off service following cleaning and disinfection of a high risk area, or on an on-going regular basis as part of a hygiene monitoring and evaluation plan.
